

Join EPA in protecting the climate.

ENERGY STAR® qualified products and practices help you save energy, save money, and protect the environment.

TV

Look for the ENERGY STAR on consumer electronics. These products use less energy without sacrificing quality or performance.

Ceiling Fan

Ceiling fans can help you save on your energy bills. In addition to cooling you efficiently in the summer, hitting the reverse switch will change the direction of the fan so that it pushes warm air down into the room, keeping your room more comfortable—and more energy efficient—in the winter.

Window

With proper installation to ensure all gaps around them are sealed, windows that have earned the ENERGY STAR can help improve your comfort and cut drafts.

Drapes

During the cold weather, take advantage of the sun's warmth by keeping drapes open during daylight hours. To keep out the heat of the summer sun, close window shades and drapes in warm weather.

Air Register

Make sure air registers and vents are clear of furniture and other obstructions to allow air to flow freely throughout the room.

E-Cycling

Recycling reduces the amount of hazardous waste in our landfills. When upgrading to new home electronics that have earned the ENERGY STAR, take your old electronics to a state or local collection program, charitable organization, or recycling program that accepts used electronics.
